

Passenger Terminal EXPO 2011

29. 30. 31 MARCH 2011
BELLA CENTER
COPENHAGEN, DENMARK

Dream machine

In one of the world's most modern baggage halls, at Amsterdam Airport Schiphol, which is designed for a capacity of about 10 million bags a year, approximately 60% of the luggage is handled by six robot-based automated baggage loading cells provided by **Grenzebach**. The benefits

of this unique yet field-proven technology include cost savings, increased efficiency, optimised space use, improved working conditions, process integration and traceability, and gentle bag handling. The layout and configuration can be adapted to suit most airport environments.
