

Analyzing and evaluating data reliably Grenzebach Statistics

DATA SHEET | STATISTICS

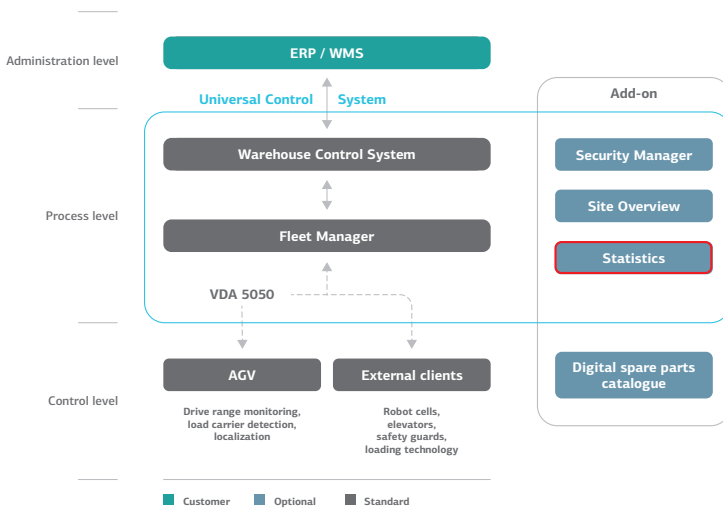

Statistics is a powerful software solution for the transparent visualization and analysis of vehicle and system data.

The dashboard transparently displays all relevant data, while graphics and key figures can be flexibly adapted to specific requirements. Thanks to central data storage and visualization, you have all important information at a glance.

Statistics also improves system diagnostics. Errors and deviations can be quickly identified and rectified with the statistical evaluation.

We can offer you full flexibility: on-premise or cloud, individual web front end for visualization or open interface (API) to retrieve the data.

Technical data can be of great benefit to your company through targeted analyses and the resulting transparency. This will allow you to optimize systems and processes and work more efficiently.

Your benefits:

EASY TO PLAN

Statistics assists with the planning and design of your systems and installations. Capacity utilization can be identified emulatively and simulatively and adapted during the planning phase.

INSTALL

With its transparent visualization of the system and vehicle key figures, Statistics supports you during the commissioning and ramp-up phase of the systems and shows you adjustment possibilities.

USE

You can analyze and optimize your logistics processes clearly based on the collected data. Statistics visualizes live and historical data, e.g., for shifts, days, weeks, months, etc.

SERVICE

You can use Statistics to monitor the life cycle of your vehicles and systems. Based on the collected data, predictive maintenance is possible.

Statistics provides these functions:

Dashboard for individual visualization

Analysis and data evaluation of relevant KPIs

Generating reports and statistics

Interface for integration into customer systems

On-premise or cloud

Central and secure data storage

Connection to the Security Manager

Compliance with data protection
